

CentCompras — User Manual: Goods Receipt & Stock

The Goods receipt console · Version 1.0 · For warehouse staff (admin / manager / operator)

Also available: the [Item Console manual](#), the [Purchase Orders manual](#), the [Manager catalog](#) at `/manage/catalog/`, the [Branches & Requisição interna manual](#), the [Edge cases & limits](#) reference, and the [Admin & Superuser Reference](#).

Where do I go?

Open your browser and go to:

`https://<your-domain>/manage/goods-receipts/`

(During development on your own machine: `http://127.0.0.1:8015/manage/goods-receipts/`)

Sign in with your email + password. This manual assumes you already raise purchase orders; see the [Purchase Orders manual](#) for draft → submit → approve.

You can also open this screen from an **approved** purchase order: click **Receive goods** (Receber mercadoria) in the PO drawer. That takes you here with the order already selected (`?po=<number>`).

1. Your role — what you can do

Role	See receipts & movements	Record a receipt	Adjust stock
Admin (<code>warehouse_admins</code>)	[OK]	[OK]	[OK]
Manager (<code>warehouse_managers</code>)	[OK]	[OK]	[NO]
Operator (<code>warehouse_data_operators</code>)	[OK] (read-only)	[NO]	[NO]

- **Operator** sees the same lists but has no **New receipt** or **Adjust stock** buttons.
- **Adjust stock** is the correction tool — **admin only**. Day-to-day receiving is a goods receipt, not an adjustment.
- The Django `/admin/` screen is for the **site superuser only** — it is not part of this manual.

A button missing from your screen is **not a bug**; it is not part of your role.

2. How stock works (read this once)

Stock is **never typed on the item**. You do not open an item and fill in a quantity.

```
Approved purchase order
  ↓
Goods receipt (this console)
  ↓
Stock movement (+ quantity, signed)
  ↓
Item quantity (cached balance – updated automatically)
```

- Each receipt writes one **stock movement** per line received. The movement is **signed**: receipts are positive (+10), adjustments can be positive or negative (+2 or -2).
- The number you see on the item later is a **cached balance** of those movements. If the two ever look wrong, trust the **Stock movements** table — that is the ledger.
- You cannot edit or delete a receipt after you confirm it. A mistake is corrected with a **new receipt** (if the PO still has remaining quantity) or an **admin stock adjustment**.

3. The console at a glance

CENTCOMPRAS

Goods receipt & stock

⚙

New receiptAdjust stock

Receipts

GR #	PO #	Supplier	Received by	Received at	Reference	Total
No goods receipts yet.						

< PrevPage 1 of 1Next >

Stock movements

All items

Item	Type	Quantity	Reference	Reason	By	When
No stock movements yet.						

< PrevPage 1 of 1Next >

The screen is one page with a top bar, two action buttons, then two tables.

A. Top bar - Title: **Goods receipt & stock** (Receção de mercadorias e stock) - **Settings** gear (top-right) — signed in as you@company, small **Sign out** link on the Settings title row. **Help** is the blue ? icon next to the gear (placeholder). Language and theme are set on the staff dashboard (/). - Press **Escape** to close the Settings panel, or the **New receipt / Adjust stock** dialog (**Cancel**)

B. Toolbar

Button	Who sees it	What it does
New receipt (Nova receção)	manager / admin	Record goods against an approved PO

Button	Who sees it	What it does
Adjust stock (Ajustar stock)	admin only	Manual correction (count, damage, error)

C. Receipts table — one row per goods receipt (a delivery you booked in).

Column	Meaning
GR # (N.º GR)	Goods-receipt number
PO # (N.º PO)	The purchase order this delivery belongs to
Supplier	Who sent the goods
Received by	Who booked it in
Received at	Date/time (DD/MM/YYYY, 24h)
Reference	Supplier delivery note / guia de entrega (if you typed one)
Total	Sum of quantities on this receipt (not money)

The receipts list is a log. There is no “open / edit” drawer on a receipt row.

D. Stock movements table — the ledger: every **+** and **-** against an item.

Column	Meaning
Item	Internal code — description
Type	Receipt / Adjustment / Goods issue
Quantity	Signed amount (+10 in, -2 out)
Reference	For a receipt: GR #12 and the delivery-note text if you entered one
Reason	Filled on adjustments
By / When	Who and when

Use the **item filter** (All items / Todos os artigos) above the movements table to see one item’s history.

4. Recording a goods receipt

You can only receive against a purchase order that is **Approved** or already **Received** (a previous partial delivery). Draft, submitted, rejected, and closed orders do not appear in the list.

4.1 From this console

1. Click **New receipt** (Nova receção).
2. Choose the **Purchase order** (Encomenda de compra) — shown as #12 – Supplier name.
3. The lines of that order appear with **Ordered / Received / Remaining / To receive**.
4. **To receive** is pre-filled with the **remaining** quantity. Change it if this delivery is only part of the order. Set a line to **0** (or clear it) to skip it on this receipt.
5. (Optional) **Reference (delivery note)** (Referência — guia de entrega) — the supplier’s GR / guia number. Recommended: it appears on the receipt row and on the stock movement.
6. (Optional) **Notes**.

7. Click **Receive** (Receber).

You should see: "Goods receipt recorded and stock updated." (Receção registrada e stock atualizado.)

The new row appears in **Receipts**, and matching + rows appear in **Stock movements**.

[SCREENSHOT] [SCREENSHOT — new receipt dialog with ordered / remaining / to receive]

4.2 From the purchase-order console

1. Open the approved (or already received) PO.
2. Click **Receive goods**.
3. You land on this screen with that PO already chosen — continue from step 3 above.

4.3 Partial shipments

Several receipts against the same PO are normal.

This delivery	What to type in To receive
Full remaining quantity	Leave the pre-filled numbers
Only some of a line	Type the quantity that actually arrived (must be greater than 0 and not more than remaining)
A line not on this truck	Leave 0 — that line is omitted from this receipt

- You must receive **at least one** line with a quantity greater than zero.
- The app **rejects** a quantity that would go over the remaining amount. You cannot receive more than was ordered.
- Lines that are already fully received are hidden (you will see "All lines on this purchase order are fully received.").

4.4 What happens to the purchase order

After this receipt	PO status
First (or further) partial delivery	Received
Every line's remaining quantity is now 0	Closed (automatic)

You do not close the PO by hand from this screen. Closing is the result of having received everything.

New units also become **available to promise** for waiting branch requisições: the oldest approved request that still needs the item gets the hold first. See [Branches & Requisição interna §7](#).

If the list of purchase orders is empty: "No approved or partially-received purchase orders." Approve a PO first, or the open ones are already closed.

5. Reading the stock movements ledger

This table is the audit trail for quantity.

Type	When it appears	Quantity
Receipt (Receção)	You booked in a goods receipt	Positive (+)
Adjustment (Ajuste)	An admin used Adjust stock	Positive or negative
Goods issue (Saída de mercadoria)	A branch request was shipped (see the branches manual)	Negative (-)

Filter by item when you are investigating one product. A receipt movement's **Reference** column points back to the GR (GR #4 – DN-001).

6. Adjust stock (admin only)

Use this for **corrections**, not for supplier deliveries. Typical reasons: stock count, damaged goods, a receipt booked against the wrong quantity with no remaining PO quantity to fix it.

1. Click **Adjust stock** (Ajustar stock).
2. Choose the **Item**.
3. Enter **Quantity**: - **Positive** (e.g. 5) — adds stock - **Negative** (e.g. -5) — removes stock - 0 is rejected
4. (Recommended) **Reason** — stored on the movement.
5. Click **Adjust** (Ajustar).

You should see: "Stock adjusted." (Stock ajustado.) A new row of type **Adjustment** appears in the ledger.

A **negative** adjust cannot take on-hand **below the quantity already reserved** for approved / fulfilling requisições. For damage or a count that is lower than held stock: short-close or cancel those holds (reason required), then adjust.

A **positive** adjust (and a goods receipt) offers the new units to waiting requisições, oldest `approved_at` first.

Managers and operators do not see this button. If a count is wrong, ask an admin.

7. What you cannot do here

- Receive against a PO that is not **Approved** or **Received**.
- Receive more than the remaining ordered quantity.
- Type stock on the item form in the item console — that field is not editable there.
- Edit or delete a goods receipt after it is saved.
- Issue stock to a branch from here — that is done in the [Branches & Requisição interna manual](#).
- Change selling prices or supplier costs — that stays in the [item console](#).

8. Dates, timezone, language & theme

Same as the other consoles:

- **Dates:** DD/MM/YYYY, 24-hour time (e.g. 20/08/2026 14:05).
 - **Timezone:** your local time (new users default to **Europe/Lisbon**).
 - **Language:** English / Português — set on the staff dashboard (/) or branch catalog (/ branch/catalog/); remembered in this browser.
 - **Theme:** light / dark — same bar as language; remembered.
-

9. FAQ

Q1. I don't see my purchase order in the list — why? It must be **Approved** (or already **Received** from an earlier partial). Draft and submitted orders cannot be received. Closed and rejected orders cannot be received either.

Q2. Can I receive a delivery in several lorries? Yes. Record one goods receipt per delivery. Remaining quantity shrinks each time. When remaining is 0 on every line, the PO **closes**.

Q3. I typed too much on a receipt — can I edit it? No. Receipts are permanent. If the PO still has remaining quantity, do not “fix” it by receiving less next time unless that matches reality. If the item's on-hand quantity is wrong, an **admin** uses **Adjust stock** with a reason.

Q4. Why is the Total column not money? It is the **sum of quantities** on that receipt (pieces, kg, ...), not the PO's gross value. Money lives on the purchase order.

Q5. Where do I see the item's current stock? The cached balance is on the **manager catalog** at /manage/catalog/ (stock + reorder level + buying/selling prices). You can also add the + and – rows for that item in **Stock movements**, or ask an admin to confirm in Django admin (superuser). Do not type a number onto the item.

Q6. I can't see “Adjust stock” — why? Only **admins** can adjust. Managers record receipts; operators are read-only. See §1.

Q7. I can't see “New receipt” — why? Your role is **operator**, or you don't have add-receipt permission. You can still read the tables.

Q8. What should I put in Reference? The supplier's delivery note / guia de entrega number. It is optional but it is how you match a warehouse booking to a paper (or PDF) from the supplier.

Q9. Does receiving change the purchase-order totals (net / VAT / gross)? No. Those figures were **frozen at approval**. Receiving only writes stock and moves the PO status to Received / Closed.

Q10. Dates look like 05/08/2026 — is that 5 August or 8 May? 5 August 2026. The app uses day/month/year everywhere.
