

CentCompras — User Manual: Branches & Requisição interna

Branch ordering · Version 1.0 · For branch staff (operator / manager / admin) **and** warehouse staff

Also available: the [Item Console manual](#) · [Purchase Orders](#) · [Goods receipt & stock](#) · [Manager catalog](#) · [Edge cases & limits](#) · [Admin & Superuser Reference](#).

This manual covers everything a **satellite branch** does, plus the **warehouse** side of the same loop. Read it end-to-end once — the loop only makes sense as a whole.

The big picture

A branch orders from the central warehouse through a **Requisição interna** (internal request). The loop:

```
Branch browses catalogue    (cost hidden, stock as a hint)
      ↓
Branch raises a requisição (draft)
      ↓
Branch manager approves    (freezes totals; gross shown before confirm)
      ↓
Warehouse ships            (goods issue – central stock goes DOWN)
      ↓
Branch confirms arrival    (branch receipt – branch stock goes UP)
```

Out of stock? The warehouse raises a **purchase order** to a supplier first — see the [Purchase Orders](#) and [Goods receipt](#) manuals. That part is unchanged.

Where do I go?

Who	Page	What for
Branch (any role)	/branch/	Branch dashboard — cards to every branch tool
Branch (any role)	/branch/select/	Choose your branch (only when you belong to several)
Branch (any role)	/branch/catalog/	Read-only catalogue (cost hidden, stock hint)
Branch (any role)	/branch/requests/	Raise & edit a requisição
Branch (any role)	/branch/threads/	Request items not in the catalogue
Branch (manager / admin)	/branch/requests/	Approve / reject
Branch (any role)	/branch/receipts/	Confirm arrival against a dispatch

Who	Page	What for
Branch (any role)	/company-voice/	Company-wide suggestion box
Warehouse	/manage/internal-requests/	Queue of approved requests + goods issue
Warehouse admin	/manage/branch-approval-limits/	Branch manager approval caps

(During development on your own machine: <http://127.0.0.1:8015/...>.)

[SCREENSHOT] [SCREENSHOT — branch dashboard with card grid and top navigation]

1. Your role — what you can do

There are **three branch roles** (set for you by the head office) and the usual **warehouse roles**. A button missing from your screen is **not a bug** — it is not part of your role.

1.1 Branch roles

Capability	Operator	Manager	Admin
Browse catalogue	[OK]	[OK]	[OK]
Raise & edit a draft, submit, cancel a draft	[OK]	[OK]	[OK]
Approve / reject	[NO]	[OK] (within caps)	[OK] (unlimited)
Cancel an approved request	[NO]	[OK]	[OK]
Confirm arrival (branch receipt)	[OK]	[OK]	[OK]
Branch short-close	[NO]	[OK]	[OK]
Adjust branch stock	[NO]	[NO]	[OK]

- **Operator** can do the day-to-day (catalogue, request, receipt) but never approves and never short-closes.
- **Manager** adds approval/rejection/short-close, within **EUR gross caps** (self vs others — see §8).
- **Admin** is the branch power user: unlimited approval, plus **branch stock adjustments**.
- The Django `/admin/` screen is for the **site superuser only**. Branch staff never log into `/admin/`. Head office creates your login and your branch role there.

1.2 Warehouse roles (the other half of the loop)

Capability	Who
See the request queue + issue goods	Operator grade 2+, manager, admin
Warehouse short-close	Manager grade 2+ or admin
Edit branch approval caps	Warehouse admin (/manage/branch-approval-limits/)

2. Choosing your branch (the picker)

You may belong to **one branch, several branches, or none**. After signing in:

Your situation	What happens
One branch	You go straight to <code>/branch/</code> (branch dashboard). Your branch is selected automatically — no picker.
Several branches	You land on <code>/branch/select/</code> — pick one, then continue to the dashboard.
No branch	The picker says "You have no active branch access." Ask your administrator.

From the dashboard, open **Catalog**, **Requisição interna**, **Threads**, **Receipts**, or **Company Voice** from the cards. Every branch page also has the same links in the top bar (**Home**, **Catalog**, **Requests**, **Threads**, **Receipts**).

Switch branch appears only when you belong to **more than one** branch. If you see only one branch in your life, that link is hidden — you cannot browse other branches.

Sign out is a small link on the **Settings** title row (gear, top-right). **Help** is the blue **?** icon next to the gear (placeholder). **Language** and **theme** are on the dashboard (and every branch page that shows the preferences bar).

[SCREENSHOT] [SCREENSHOT — branch picker with two branches listed]

3. The branch catalogue (read-only)

Open `/branch/catalog/`. This is the same product catalogue the warehouse manages, but with two deliberate differences:

1. **Cost is hidden.** You see the **selling prices** (Retail / Wholesale / Special), never the supplier cost.
2. **Stock is only a hint** — never an exact number.

Warehouse staff see exact stock **and** cost on the **manager catalog** at `/manage/catalog/`.

3.1 The availability hint

Hint	Meaning
In stock	Something is free to ship today (available stock above the reorder level).
Low	Free-to-ship quantity is at or below the reorder level — request soon.
None	Nothing is free to ship today (the shelf is empty, or everything on the shelf is already held for earlier approved requisições). You may still raise a requisição — the warehouse will procure and you wait in line.

You will **not** see the exact on-hand quantity — that is a warehouse figure. **None does not block a requisição.**

4. Raising a requisição

Open `/branch/requests/`.

4.1 Create a draft

1. Click **New request** (Nova requisição).
2. The request starts as a **draft**.

4.2 Add lines

1. In the line form, pick an **item** from the catalogue picker.
2. Enter the **quantity** (greater than zero).
3. Click **Add**.

A line is **rejected** if:

- the item has **no wholesale price**, or
- the item is **already** on this request (edit the existing line instead), or
- the item (or its family) is **inactive**.

You can **remove** a line while the request is still a draft.

4.3 Submit

When the request has at least one line and everything is active, click **Submit** (Submeter). The request becomes **submitted** and waits for a manager.

- You can no longer edit lines after submitting.
- A **draft** can be **cancelled** by any branch role (no reason needed).

5. Approve / reject (manager or admin)

Open a **submitted** request.

5.1 Approve

1. Click **Approve** (Aprovar).
2. The confirmation shows the **gross** (wholesale × quantity + VAT) — review it.
3. Confirm.

Approving **freezes the totals** — the prices and VAT are snapshotted at this moment, so later price changes don't rewrite history.

Approving also **holds whatever warehouse stock is currently free** for this request (see §7). A later branch cannot take those units. If the hub has less than you asked for, the request is still approved: the free portion is held, and the rest waits for incoming stock (first approved wins).

Approver	Limit
Admin	Unlimited

Approver	Limit
Manager	EUR gross caps: one for your own requests, one for other people's (set by the warehouse admin, \$8)

5.2 Reject

Click **Reject** (Rejeitar) and give a **reason**. The request ends as **rejected** — raise a new one if you still need the goods.

[SCREENSHOT] [SCREENSHOT — approve confirmation showing gross]

6. Cancelling a request

From	Who	Reason required?
Draft	Any branch role	No
Approved	Manager / admin	Yes

Cancelling an **approved** request (no dispatch yet) **releases the hold** immediately; those units are offered to the next waiting requisição (oldest `approved_at` first).

Once the warehouse has **shipped** (issued goods), a request can no longer be cancelled — only **short-closed** (\$7 / \$8). That rule stops stock from being dispatched and then "un-dispatched".

7. Warehouse — ship (goods issue)

Open `/manage/internal-requests/`. This queue shows **approved** and **fulfilling** requests only — never drafts, submitted, rejected, or cancelled. The header matches other warehouse consoles: **CentCompras** (links to `/`), **Branch caps**, and **Settings** (sign out).

7.1 Issue goods

1. Select a request.
2. For each line you are shipping now, type the **issue quantity**.
3. (Optional) **Reference** (your guia / dispatch number) and **Notes**.
4. Click **Issue** (Emitir).

After a successful issue, the page refreshes the queue. If the request is fully shipped (or otherwise no longer in the queue), the detail panel clears so you only see queued items. Partial issues keep the request selected with updated quantities.

Cancel — shown only when a request is selected in the detail panel. Clears the detail view without reloading, showing only the queue (no request selected).

Rules:

- You cannot issue **more than is reserved for this request** (the quantity held at approve, plus any later incoming stock allocated to it).

- You cannot issue **more than the request's remaining** quantity.
- **Partial issue** is fine — the request becomes **fulfilling** and the rest ships later.
- A **complete** issue marks the request **shipped**.

The queue shows **reserved**, **backorder** (still waiting for stock), **on hand**, and **available** (on hand minus all holds) per line. Issue quantity defaults to the reserved amount.

Issuing **decrements central stock** and the hold together.

If another branch is first in line for free stock, you cannot ship to a later request until that hold is issued, cancelled, or short-closed (reason required).

7.2 Warehouse short-close

If you can't (or won't) ship the rest, click **Short close** and give a **reason**. The unshipped remainder is written off and any hold on that remainder is **released** to the next waiting requisição (oldest `approved_at` first).

- If **nothing was dispatched yet** (request still **approved**), the request becomes **closed** — there is nothing for the branch to receive.
- If you already **partially issued** goods (request **fulfilling**), the request becomes **shipped** so the branch can receive what was sent and short-close any remainder.

Only a **manager grade 2+ or admin** can do this.

Internal requests

warehouse.admin@centcompras.dev Branch caps Sign out

Queue (approved / fulfilling)

#	Branch	Status	Gross
2	North	approved	445.44

Request

Code	Description	Qty	Issued	Remaining	On hand	Issue qty
Reference (guia)		Notes		Issue	Short close	

8. Branch — confirm arrival (receipt)

Open `/branch/receipts/`. It lists the **dispatches** (guias) for your branch — requests that are **shipped** or **received** (i.e. on their way or partly arrived).

8.1 Receive against a dispatch

1. Select a dispatch.
2. For each line, type the **received quantity** (what actually arrived — damage or shortage means you type less).

3. Click **Receive** (Receber).

Rules:

- You cannot receive **more than was shipped** on that line.
- **Partial** receipt → request stays **received** (more still expected).
- **Full** receipt → request becomes **closed**.

Receiving **increments branch stock** immediately.

8.2 Branch short-close

If the rest won't arrive, click **Short close** and give a **reason**. The unreceived remainder is written off and the request becomes **closed**. Only a **manager or admin** can do this.

[SCREENSHOT] [SCREENSHOT — branch receipt with received quantities]

9. Branch stock adjustment (admin only)

Branch **admin** may correct branch stock directly — for counts, damage, or mistakes.

1. On `/branch/receipts/`, use the **Adjust stock** area.
2. Enter **Item**, **Quantity** (positive to add, negative to remove — 0 is rejected), and a **Reason**.
3. Click **Adjust stock**.

Managers and operators do not see this option. Branch stock is a ledger like warehouse stock — every receipt and adjustment is recorded and the balance is computed, never typed onto the item.

10. Branch approval caps (warehouse admin)

Open `/manage/branch-approval-limits/` (warehouse **admin** only). This sets how much a branch **manager** may approve, in **EUR gross**. The header matches other warehouse consoles: **CentCompras** (links to `/`), **Requests**, and **Settings** (sign out).

- **Others** — the cap when the manager approves someone else's request.
- **Self** — the (lower) cap when the manager approves their **own** request.

Branch **admins** have no cap (unlimited). Operators never approve. These caps are global across all branches in this phase.

[SCREENSHOT] [SCREENSHOT — branch approval limits editor]

11. The request life (status cheat-sheet)

Status	Meaning
draft	Branch is building it
submitted	Waiting for a branch manager
approved	Visible to the warehouse; not yet shipped
rejected	Manager rejected it (terminal)
fulfilling	Partly shipped; warehouse remainder still open
shipped	Warehouse done (fully issued or short-closed)
received	Partly arrived; branch remainder still open
closed	Branch done (fully received or short-closed)
cancelled	Voided before any goods issue

12. What you cannot do here

- See the supplier **cost** from a branch account (selling prices only).
- See the **exact** warehouse stock from a branch account (hint only).
- Approve as an **operator**, or approve over your **manager cap**.
- Request an **inactive** item, or a line with **no wholesale price**, or the **same item twice** on one request.
- Edit a request after **submit**.
- **Issue** more than is reserved for that request, or more than the request's remaining.
- **Receive** more than was shipped.
- **Cancel** a request after goods have been issued (short-close instead).
- Short-close as an **operator** (either side).
- Adjust branch stock unless you are the branch **admin**.

13. Dates, timezone, language & theme

Same as the other consoles:

- **Dates:** DD/MM/YYYY, 24-hour time (e.g. 20/08/2026 14:05).
- **Timezone:** your local time (new users default to **Europe/Lisbon**).

- **Language:** English / Português — set on the staff dashboard (/) or branch dashboard (/ branch/); remembered in this browser.
 - **Theme:** light / dark — same bar as language on those landing pages; remembered.
-

14. Related consoles

- [Item Console](#) — where the warehouse manages the catalogue (items, families, suppliers, prices).
 - [Manager catalog](#) — warehouse read-only stock + prices (/manage/catalog/ ; cost visible).
 - [Purchase Orders](#) — how the warehouse restocks from suppliers.
 - [Goods receipt & stock](#) — booking supplier deliveries into central stock.
-

15. FAQ

Q1. Why can't I see the cost price in the branch catalogue? Deliberate. Branches see selling prices only; supplier cost is warehouse-confidential. Warehouse staff see cost on the [manager catalog](#) at /manage/catalog/. If you need a price you can't see, ask the warehouse.

Q2. The catalogue says "None" for an item — can I still request it? Yes. **None** means nothing is free to ship today (empty shelf, or stock already held for earlier approved requisições). Raise the requisição anyway — you join the wait. Incoming stock is offered to the oldest approved request first.

Q3. Why was my line rejected? The three rules: the item must have a **wholesale price**, it must be **active**, and it must not already be on the request. Check which one applies.

Q4. I approved a request and the prices changed later — did my request change? No. Approving **freezes** the totals (wholesale + VAT snapshot). Later price changes don't touch an approved request.

Q5. The warehouse shipped less than I asked — what do I do? Confirm the **received quantity** that actually arrived at /branch/receipts/. If the rest won't come, a **manager/admin** short-closes it. The request then closes.

Q6. I can't see "Approve" — why? You're an **operator** (operators never approve), or the request isn't **submitted**. Ask a manager, or submit first.

Q7. I can't see "Short close" — why? Short-close is manager/admin only, on both the warehouse and branch side.

Q8. Can I request the same item twice? No — one line per item per request. **Edit** the line's quantity instead of adding a second line.

Q9. My branch login says "no active branch access" — what's wrong? Head office hasn't assigned you to a branch (or your branch is inactive). Contact your administrator — branch access is set up in Django /admin/, not by you.

Q10. What does "gross" mean on the approve button? The request's total **including VAT** (wholesale × quantity, plus VAT). That's the figure your approval cap is measured against.

Q11. Another branch asked for the same item after us — will they take our stock? No, once your requisição is **approved**. The warehouse holds the free quantity for you. A later branch can still approve (and wait), but they cannot be issued those held units.

Q12. We cancelled an approved request — what happens to the hold? The hold is released immediately and offered to the next waiting requisição (oldest first).

Q13. Why can't I cancel an approved request after the warehouse shipped? Stock is already in motion. After the first goods issue the only way to finish early is **short-close** (warehouse side) or **branch short-close** (branch side).

Q14. How is branch stock different from warehouse stock? Two separate ledgers. Warehouse stock lives on the item; **branch stock** lives per (branch, item) and only moves when you receive a dispatch or an admin adjusts it.

Q15. Can I build a requisição while offline? Yes, for **drafts only**. Open `/branch/requests/` after you have visited the catalogue online at least once (so the item list is cached). While offline you can start a **New request** and add lines from the cached catalogue. The request shows **pending sync** until Wi-Fi returns; it then uploads automatically when you open any branch page that loads the offline scripts (catalog, requisição, dashboard, etc.). **Submit, Approve, Reject,** and **Cancel** still require Wi-Fi.

Q16. The catalogue offline banner says availability may be outdated — why? Offline mode shows the **last downloaded** catalogue for the **active branch**. Warehouse stock and availability hints can change while you were disconnected. If you switch branch while offline, the app warns that the cache belongs to another branch — connect to Wi-Fi on the current branch to download its catalogue.

Q17. I switched branch with a pending offline draft — why won't it sync? Offline drafts are tied to the branch where you created them. If you switch to another branch, sync is **skipped** until you switch back and open `/branch/requests/` on that branch. Do not reuse the same offline draft UUID across branches — the server rejects it with `client_uuid is already in use on another branch`.

Q18. Shared tablet: will the next person upload my offline draft? No, if you **Sign out**. Sign out clears this browser's offline draft queue. Drafts are also tied to your user id: another person who signs in on the same tablet will not auto-sync your leftover rows. Always sign out at the end of a shift.
