

Company Voice — user manual

Company Voice is an internal suggestion box for all CentCompras staff. Anyone logged in (warehouse or branch) can post praise, concerns, suggestions, or wishes. Each post can have one inline reply thread (one level of sub-discussion).

URL: `/company-voice/`

1. Who can use it

Role	Access
Warehouse admin / manager / operator	Read and post
Branch admin / manager / operator	Read and post
Django superuser	Same as other users in the app; <code>/admin/</code> is inspect-only (no hard delete)

No branch selection is required. Warehouse and branch users share the same feed.

Open the **Settings** gear (top-right) for **Signed in as** and a small **Sign out** link on the title row. **Help** is the blue **?** icon next to the gear (placeholder). **Language** (English / Português) is set on the staff dashboard (`/`) or the branch catalog (`/branch/catalog/`) and remembered in this browser.

2. Posting

1. Open **Company Voice** from the staff dashboard (`/`) or go to `/company-voice/` .
2. Optionally choose a **tag**: Praise, Concern, Suggestion, or Wish (or leave untagged).
3. Write your message in the text area (max **4000** characters).
4. Optionally tick **Post anonymously** — other users see **Anonymous** / **Anónimo** instead of your display name.
5. Click **Post**.

Use **Refresh** to load posts and replies written by other people since you opened the page. Your own successful Post / Send / Save / Delete already reloads the feed.

Display names

- **Named post:** your first name if set on your account; otherwise the part of your email before `@` .
 - **Anonymous post:** shown as **Anonymous** (English) or **Anónimo** (Português) to everyone (author is still stored server-side for audit).
-

3. Replies (sub-threads)

- Click **Reply** (or the reply count) under a post to expand the inline discussion.
- Anyone can add the first comment — this opens the one sub-thread for that post.
- Each top-level post can have **at most one** sub-thread (no deeper nesting).
- Comments support the same **anonymous** checkbox as top-level posts.
- The reply count is **live comments only** — deleted comments stay visible as [Deleted by author] but are not counted.

4. Edit and delete

Action	Who	Rule
Edit	Author only	Within 15 minutes of posting. The Edit link hides when the window expires (even if you leave the page open).
Delete	Author only	Soft delete — content replaced by [Deleted by author]

- Deleting a **top-level post** also soft-deletes its entire sub-thread and all comments.
- Deleting a **comment** only removes that comment.
- **(edited)** appears next to the timestamp only after a real save — a brand-new post is never marked edited.
- Saving an edit while another tab already saved the same message returns a conflict; **Refresh** and try again.
- Press **Escape** to cancel an edit in progress. Changing language or expanding another reply keeps any comment you were typing.

5. Server messages (errors)

Situation	Message (EN)	code
Empty body	Message body cannot be empty.	empty_body
Body too long	Message body cannot exceed 4000 characters.	body_too_long
Edit after 15 minutes	The edit window has expired.	edit_window_expired
Not the author	Only the author can change or delete this message.	not_author
Already deleted	This message has been deleted.	already_deleted
Comment on deleted post	This post has been deleted.	post_deleted
Invalid tag	Invalid tag.	invalid_tag
Invalid JSON	Request body must be valid JSON.	invalid_json
Body not a string	Body must be a string.	invalid_body
Anonymous flag not boolean	is_anonymous must be a boolean.	invalid_anonymous
Stale edit (another tab saved first)	This message was changed in another tab. Refresh and try again.	stale_edit (HTTP 409)

The website shows the matching Portuguese string when the language is Português.

6. FAQ

Can I edit anonymously after posting?

Yes, within 15 minutes, if you are the author. The anonymous flag is fixed at create time.

Can warehouse admins remove someone else's post?

Not from the website. Superusers may **inspect** records in Django admin (`/admin/`) — they cannot hard-delete Voice rows. Authors soft-delete from `/company-voice/`.

Is the feed paginated?

Not in the first release — the full history loads in one scrollable view.

How is this different from Request threads?

Request threads (`/branch/threads/` , `/manage/threads/`) are for catalogue-gap items between a branch and the warehouse. Company Voice is company-wide feedback visible to all staff.

Is there an audit trail?

Yes. Create, edit, and delete write a `VoiceChangeLog` row (who, action, when). Rotating app logs are extra, not the source of truth.
