

CentCompras — User Manual: Approval Limits

The approval limits consoles · Version 1.0 · For warehouse staff (admin / manager / operator)

Companion: [Edge cases, limits & troubleshooting](#) — the reference for error messages and numeric bounds. [Purchase orders](#) — where the warehouse PO caps are applied. [Branches & requisição interna](#) — where the branch manager caps are applied. [Admin & Superuser Reference](#) — users, roles, permissions.

Where do I go?

Open your browser and go to:

- **Warehouse PO caps:** `https://<your-domain>/manage/approval-limits/`
- **Branch manager caps:** `https://<your-domain>/manage/branch-approval-limits/`

(During development on your own machine: `http://127.0.0.1:8000/manage/approval-limits/` and `http://127.0.0.1:8000/manage/branch-approval-limits/`)

Sign in with your email + password (the one your administrator gave you). These consoles are **read-only for most staff** — only warehouse **admins** can change the caps (see §3).

1. What approval limits are

Approval limits are **monetary caps** (in **EUR, VAT included**) that control who may approve what:

Cap	Applies to	Model
Warehouse PO cap	Approving a purchase order (<code>/manage/purchase-orders/</code>)	<code>ApprovalLimit</code> (group + grade → self/others)
Branch manager cap	Approving an internal request (<code>/manage/internal-requests/</code> + <code>/branch/...</code>)	<code>BranchApprovalLimit</code> (role manager → self/others)

Every cap has **two values**:

- **Approve others** — the maximum gross amount a person may approve on a document **created by someone else**.
- **Self-approve** — the maximum gross amount a person may approve on a document **they created themselves**.

The **self** cap is always lower — you are not meant to approve your own work beyond small amounts.

2. The two consoles at a glance

2.1 Warehouse PO caps — /manage/approval-limits/

CENTCOMPRAS

Approval limits (EUR gross)

Signed in as warehouse.admin@centcompras.dev

Sign out

Amounts are EUR, VAT included. Only warehouse admins can edit.

Group	Grade	Approve others	Self-approve	
warehouse_managers 2	5000.00	100.00	100.00	<button>Save</button>
warehouse_managers 3	50000.00	500.00	500.00	<button>Save</button>

A table with one row per **group + grade**:

Column	Meaning
Group	The warehouse group the cap applies to (e.g. <code>warehouse_managers</code>)
Grade	The grade within that group (managers: 1-3; operators: 1-2)
Approve others	Max gross (EUR) this grade may approve on another user's PO
Self-approve	Max gross (EUR) this grade may approve on their own PO
(button)	Save — writes your edits (admins only)

The defaults are created automatically and never overwrite your edits:

Group	Grade	Approve others	Self-approve
warehouse_managers	2	€ 5,000.00	€ 100.00
warehouse_managers	3	€ 50,000.00	€ 500.00

2.2 Branch manager caps — /manage/branch-approval-limits/

A single panel for the **one global manager cap**:

Field	Meaning
Others	Max gross (EUR) a branch manager may approve on a request created by someone else
Self	Max gross (EUR) a branch manager may approve on a request they created
Save	Writes your edits (admins only)

Default:

Role	Approve others	Self-approve
manager	€ 5,000.00	€ 100.00

Branch admins have no cap (unlimited) — there is no row for them. **Operators never approve.** These caps are **global across all branches** in this phase.

3. Your role — what you can do

Role	See the caps	Edit the caps
Admin (warehouse_admins)	[OK]	[OK]
Manager (warehouse_managers)	[OK]	[NO]
Operator (warehouse_data_operators)	[OK]	[NO]

- Everyone with warehouse access can **view** both consoles.
- Only warehouse **admins** can change limits — the inputs are disabled for everyone else, and the API rejects edits with: "Only warehouse admins can change approval limits."
- In Django /admin/ these tables are **read-only** — day-to-day changes go through these two consoles (which write the audit trail).

4. How the caps are applied

Purchase orders (warehouse PO caps):

- Manager **grade 1**: cannot approve at all.
- Manager **grade 2+**: may approve a PO when the **gross total** is within their cap — Approve others for someone else's PO, Self-approve for their own.
- **Admins** approve any amount.

Internal requests (branch manager caps):

- A branch **manager** may approve a request within the global manager cap — Others for requests created by other users, Self for their own.
- Branch **admins**: unlimited. **Operators**: never approve.

If a document is over the cap, you'll see an error like:

- "Approval is limited to € ... gross (this PO is ...)." — over your **others** cap → ask a higher-grade approver.
- "Self-approval is limited to € ... gross ..." — over your **self** cap → ask someone else to approve.
- "No approval limit is configured for this grade." — a missing ApprovalLimit row → ask a warehouse admin to set it.

5. History (audit trail)

Every change to a limit is recorded: **who** changed it, **when**, and the **old** → **new** values, in the `ApprovalLimitChangeLog` / `BranchApprovalLimitChangeLog` tables. These logs are read-only everywhere — they are the audit trail.

6. FAQ

Q1. I see the caps but the fields are greyed out — why? Only warehouse **admins** can edit approval limits. If you're a manager or operator, the consoles are view-only by design.

Q2. What does "gross" mean here? The **gross** total = net + VAT — the full amount to fund. Caps are checked against gross, VAT included.

Q3. Can I approve my own purchase order / request? Only up to your **self-approve** cap (€ 100 / € 500 by default). Above that, another approver must approve it.

Q4. I changed a value but it reverted / shows an error — why? Values must be **zero or greater**, with at most **2 decimal places**. Negative values are rejected. Also check the banner at the top of the console for the exact message.

Q5. We changed the caps — will the defaults come back? No. Defaults are only created **when a row is missing**; they never overwrite your edits.

Q6. Are branch caps per branch or global? **Global** in this phase — one manager cap applies to all branches. Per-branch caps may come later.
